

## REQUIRED SAFETY EQUIPMENT

## SAFETY FIRST

If you are collecting the equipment for someone else please make sure this sheet is given to the equipment user to read. This sheet should be given to the site supervisor if the equipment is being hired for commercial use so that the information is available to all users.

**Before starting any job, be sure to spend a few minutes planning and understanding the hazards and risks of the job. Do this by:**

- Thinking about and observing your surroundings
- Running through the steps of the job in your mind
- Identifying the hazards, how you can get hurt and how you'll prevent it
- Knowing what plant and equipment you need
- Only starting when you can do the job safely
- Ensuring you are trained or experienced for the task
- Communicating with everyone involved

**Points to consider when planning a task. Can you:**

- Come into contact with an energy source (e.g. heat, electricity, substance under pressure) or hazardous materials
- Be struck-by or against anything?
- Be caught-in, on or between anything?
- Slip, trip or fall on the same or too a lower level
- Strain or sprain a muscle?
- Cause damage to plant equipment or property?
- Spill or pollute something?

# Carpet Cleaner

## Instructions for Use

### Pre-Start Checks and Safety

- Check EC tag is present and current
- Check Electrical cord is defect/damage free
- Check for defects/damage to motor and the unit is clean
- Make sure the unit is switched off before connecting to the power source
- Connect all accessories
- Clear area of obstacles or obstructions
- It is recommended to vacuum the area first for best results
- Make sure the electrical extension leads are heavy duty and do not exceed 20m in length

### When Operating

- For a quick clean you can often use the spray and vacuum functions together, this does not apply to all models
- For a deeper clean, select an area approx. 1m<sup>2</sup> in size and starting at the top corner spray the area pulling the spray head towards you
- Once the area selected has been sprayed return and vacuum over the area in the same way you sprayed.
- You may need to vacuum more than once however the carpet will retain a damp feel even after vacuuming.
- Regularly check how much chemical you have left and how full the waste collection tank is.

### Starting Procedure

- Ensure unit is switched off before plugging into power socket
- Add chemicals as per instructions
- Identify where you will be starting from and finishing to so you don't have to travel over the area you have just cleaned
- Select which mode the cleaner is to operate in. Some models have spray, vacuum and both, if in doubt please refer to the operator's manual by scanning QR code.

### Stopping and After Use

- Turn off the unit and unplug from the wall
- Clean the waste tank by disposing appropriately and hosing the tank clean
- Remove any remaining chemicals from the tank appropriately and hose clean
- Clean the unit with a damp cloth if required
- To speed up the drying process of the carpet it is recommended to use a carpet drying fan or a dehumidifier.
